

VMP option – for VEGA lightbar

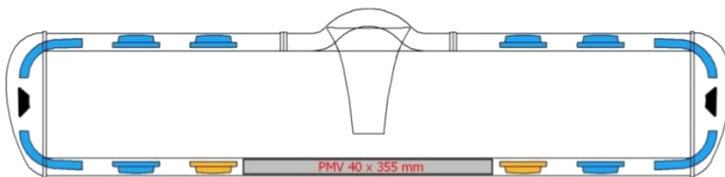

In addition to the performance of the VEGA lightbar, MERCURA proposes the addition of an integrated LED display panel.

The VMP (Variable Message Panel) option allows you to provide information or warnings to road users.

High visibility despite its compact size, the messages are quickly understandable by drivers. It can display both day and night, 100 messages (6 in LMP limited version). 7 other languages can also be added to communicate with users from European countries.

Messages can be modified or adapted using PC software. They can be programmed for fixed, flashing or scrolling display.

The "Mirror" function at the front of the lightbar also allows a displayed message to be visible in the rear view mirror.

Model shown: VEGA lightbar with built-in siren, dual rear warning lights(2 amber lights), alley lights and VMP option

T-Panel graphic panel
